

Hami Ebadzadeh

Computer Science · Software Engineering · Applied Research

hamiebad79@gmail.com · +98 912 297 9399 · github.com/moHamiEbad · mohamiebad.github.io

Profile

Computer Science background focused on software engineering and applied research. I enjoy turning ambiguous technical problems into clear, implementable solutions, with particular interests in backend systems, machine learning, optimization, and mathematically grounded problem solving. Extended project details and technical write-ups are available at mohamiebad.github.io.

Education

Sharif University of Technology

Bachelor of Computer Science

Selected Projects

Task Manager

TypeScript · Express · MySQL

Backend project used to study TypeScript migration, domain modeling, Clean Architecture, authentication, persistence, repository boundaries, and REST API design.

HBSIR PCA Explorer (Participated)

Python · PCA · Streamlit

Participated in an interactive data-analysis project centered on preprocessing, weighted PCA, interpretation of principal components, and reproducible exploratory workflows.

Financial Sentiment Transformer (Participated)

Python · Machine Learning · Transformers

Participated in a machine-learning project applying transformer-based methods to financial sentiment analysis.

Download Manager (Participated)

Go

Participated in a small Go project focused on implementing a practical download-management application.

Technical Skills

Languages: TypeScript, JavaScript, Python, Go

Backend: Node.js, Express, MySQL, REST APIs

Data / ML: PCA, machine learning, transformers, Streamlit

Engineering: Git, Docker, Linux, Clean Architecture, software architecture

Selected Coursework

High-Dimensional Probability · Optimization · Mathematical Analysis
